

## Simon Adar

### CEO

Simon Adar is the CEO of Code Ocean, a cloud-based computational research platform for quickly creating, organizing, and sharing project-based code, data, the environment, and the results. It started as part of Simon Adar's postdoc at Cornell-Tech. Together with a founding team built the one platform that helps eliminate multiple roadblocks, particularly in trying to get other researchers' code up and running. Rising from our own frustrations and the time we spent struggling with previous researchers' code, we knew there had to be a better way. He was a Runway postdoc awardee at the Jacobs Technion-Cornell Institute and holds a PhD from Tel-Aviv University in the field of Hyperspectral image processing. Simon previously collaborated with the DLR - the German Space Agency on the European FP7 funded EO-MINERS project to detect environmental changes from airborne and spaceborne sensors.
